

## Circles

The wind  
blowing the leaves  
around in wide circles

becomes  
the earth itself  
turning in a circle

becomes  
an orbit circling  
the yellow rounded sun

becomes  
the sky circling high  
overhead every night

arching  
in a circle  
like the sun and the earth

like the  
leaves all blowing  
in circles in the wind
